

Are you protected from a gas line break during an earthquake?

... with a Koso Earthquake/ Seismic Gas Shut-off Valve you will be !

These valves are earthquake-sensitive gas shut-off valves. They are intended to close in the event of an earthquake to prevent gas flow into a structure where earthquake damage may have occurred. This will greatly reduce potential risk of explosion or fire due to loss of gas line integrity or uncontrolled flow of gas after a major earthquake.

- Easy manual reset, up to 60 PSI, and 30 yr warranty makes this the valve of choice for both residential and commercial.
- No magnets used to attract debris and interfere with operation.
- No internal or external source of electrical power needed.
- Ball used for actuation, NOT for sealing of flow line.
- Listed by UL & Certified by CA State Architect in accordance with ASCE 25-97
- Manufactured in USA since 1978.
